

Developer Operations (devops)

ArgoCD

Build and Release

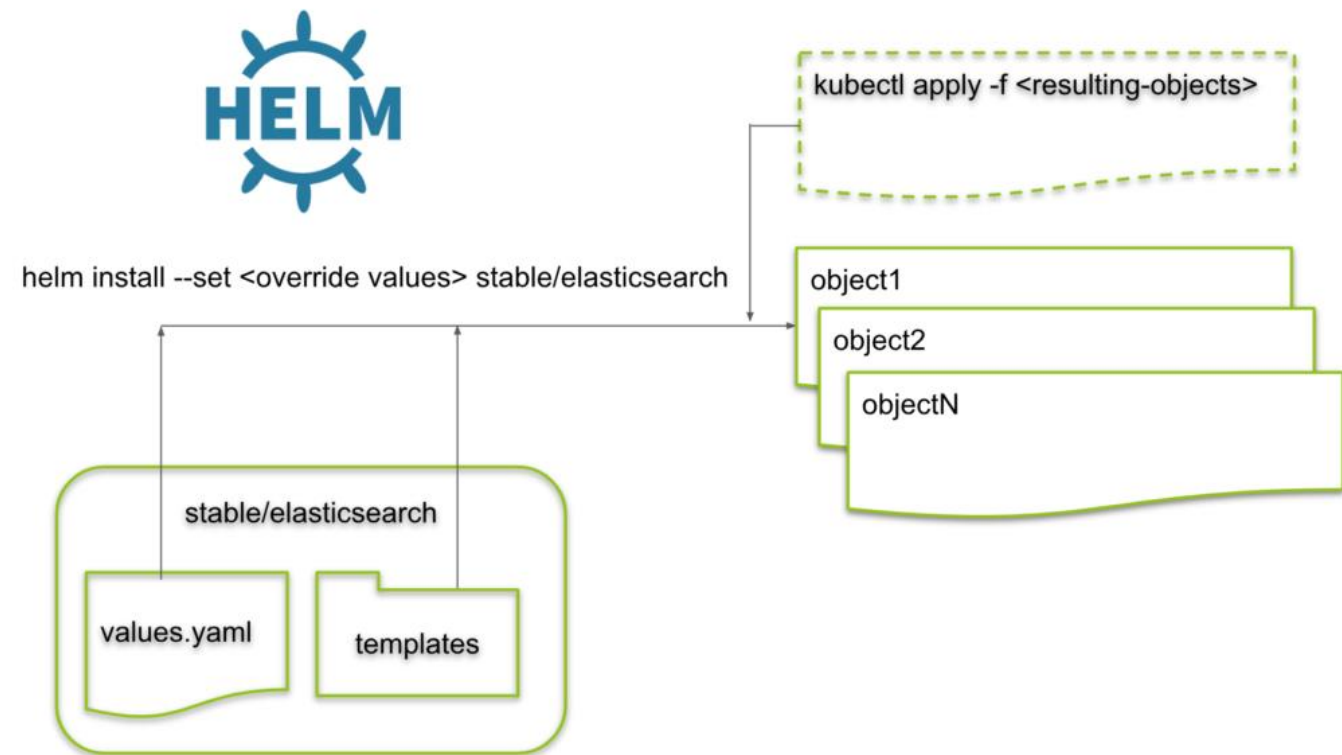

Helm, Components

Description of resources in folder

- Different value.yamls for different stages
- Same templates for all stages
- All in Git

Appliance on k8s via

- Helm CLI
 - Works in Revisions
- Third Party Tool like ArgoCD
 - Works on Git-Branches

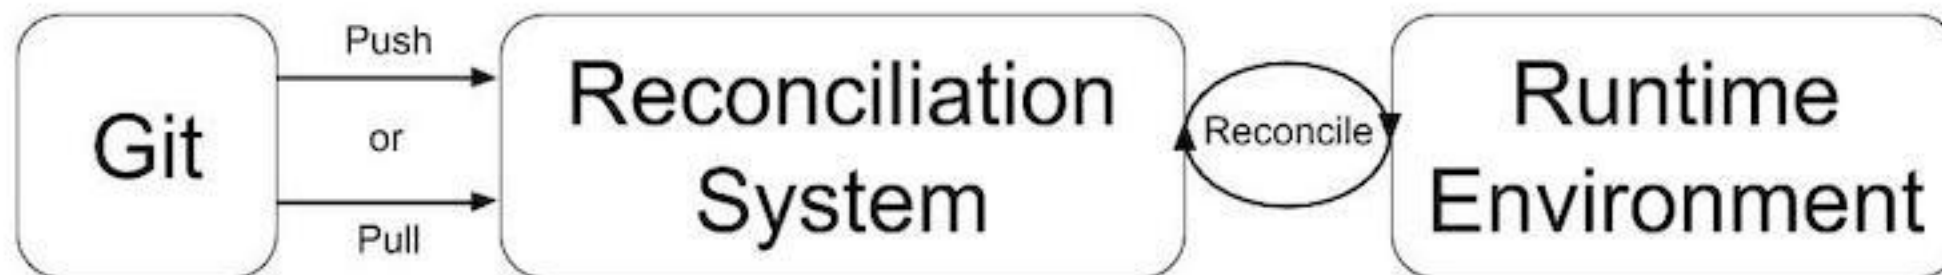

Gitops

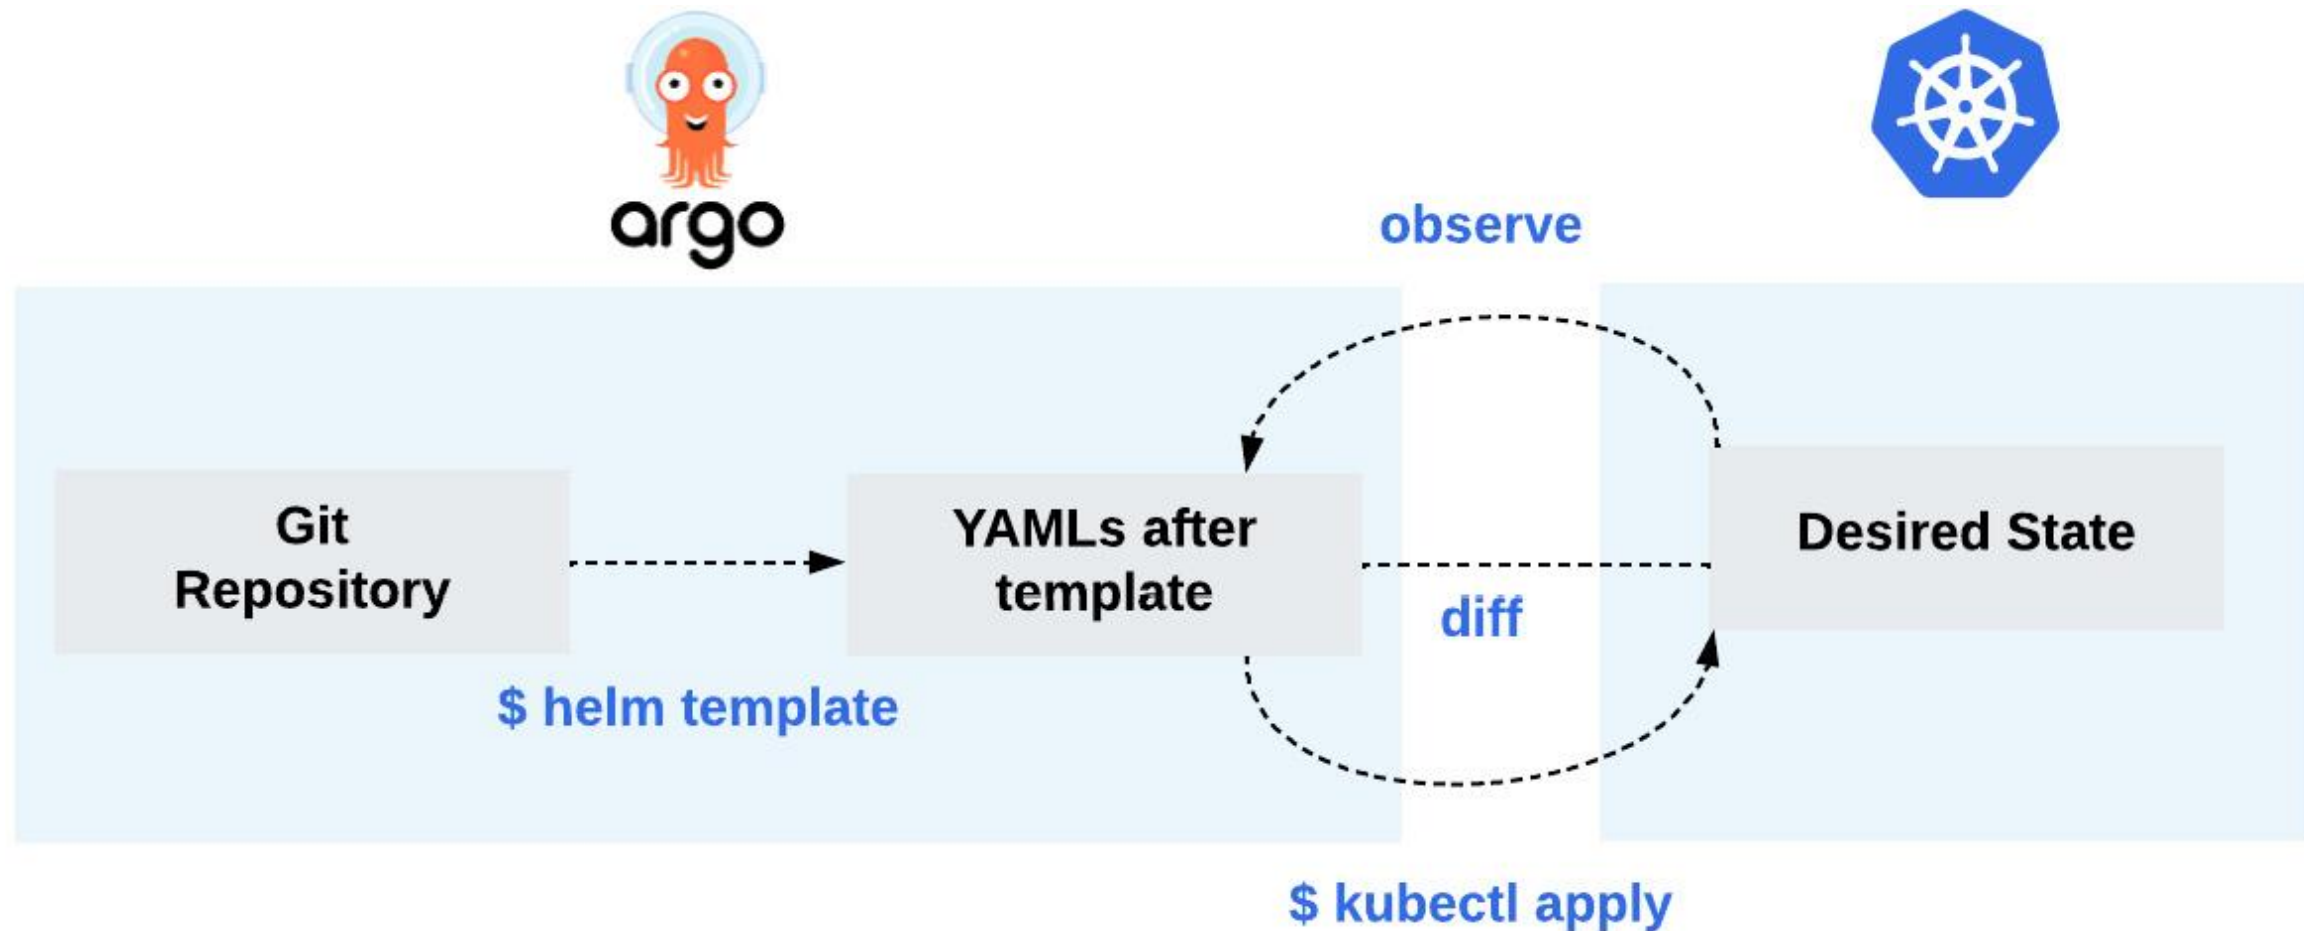

Sourcecode is the declarative source of operations

- Observability, Reviewability, Testability, ...
- Easy adoption
- Single source of truth
- Fully declarative defines target transparently
- Only technicians can work

Source	Language	Recon System	Runtime
Gitlab	Helm	ArgoCD	Kubernetes
Github	Terraform	Github Actions	AWS/Azure
Bitbucket	Ansible	Jenkins	IaaS-Instances
CodeCommit	CloudFormation	Cloud Pipeline	DNS-Entries
Bare Repo	Bash/configs	Scheduler	Server

Argo CD reconciliation

ArgoCD

Listens to Helm/Kubernetes-Resources in Git

- According to branch/tag/commit
- Applying to namespace

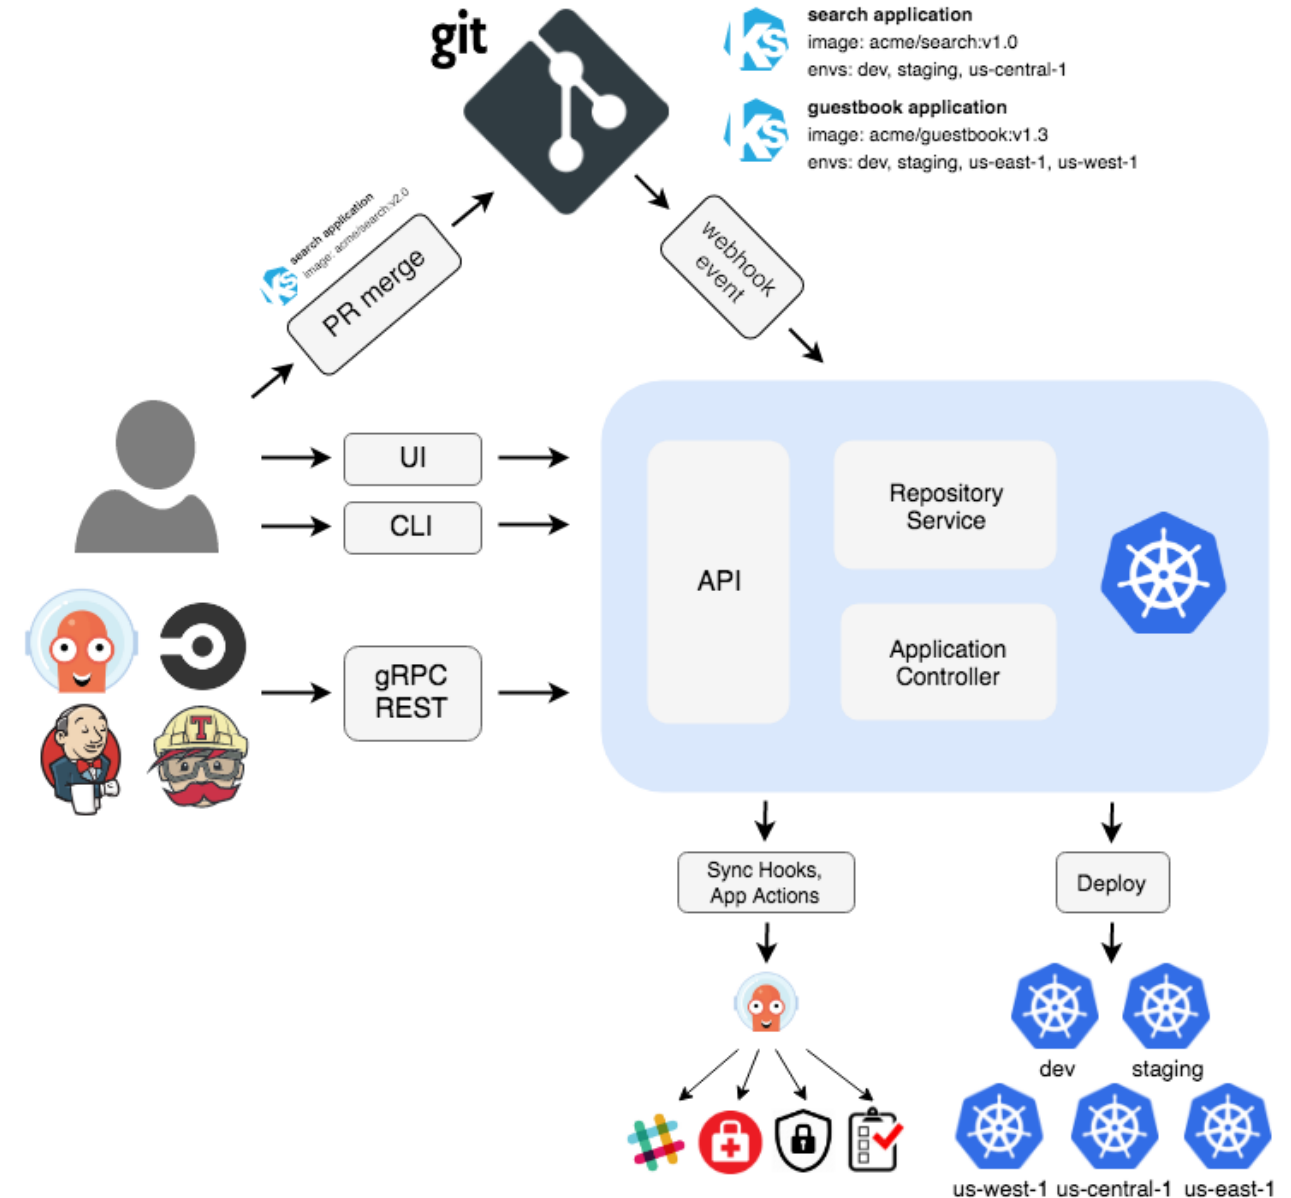

Pull approach (refreshes internal cache)

- However, push is possible

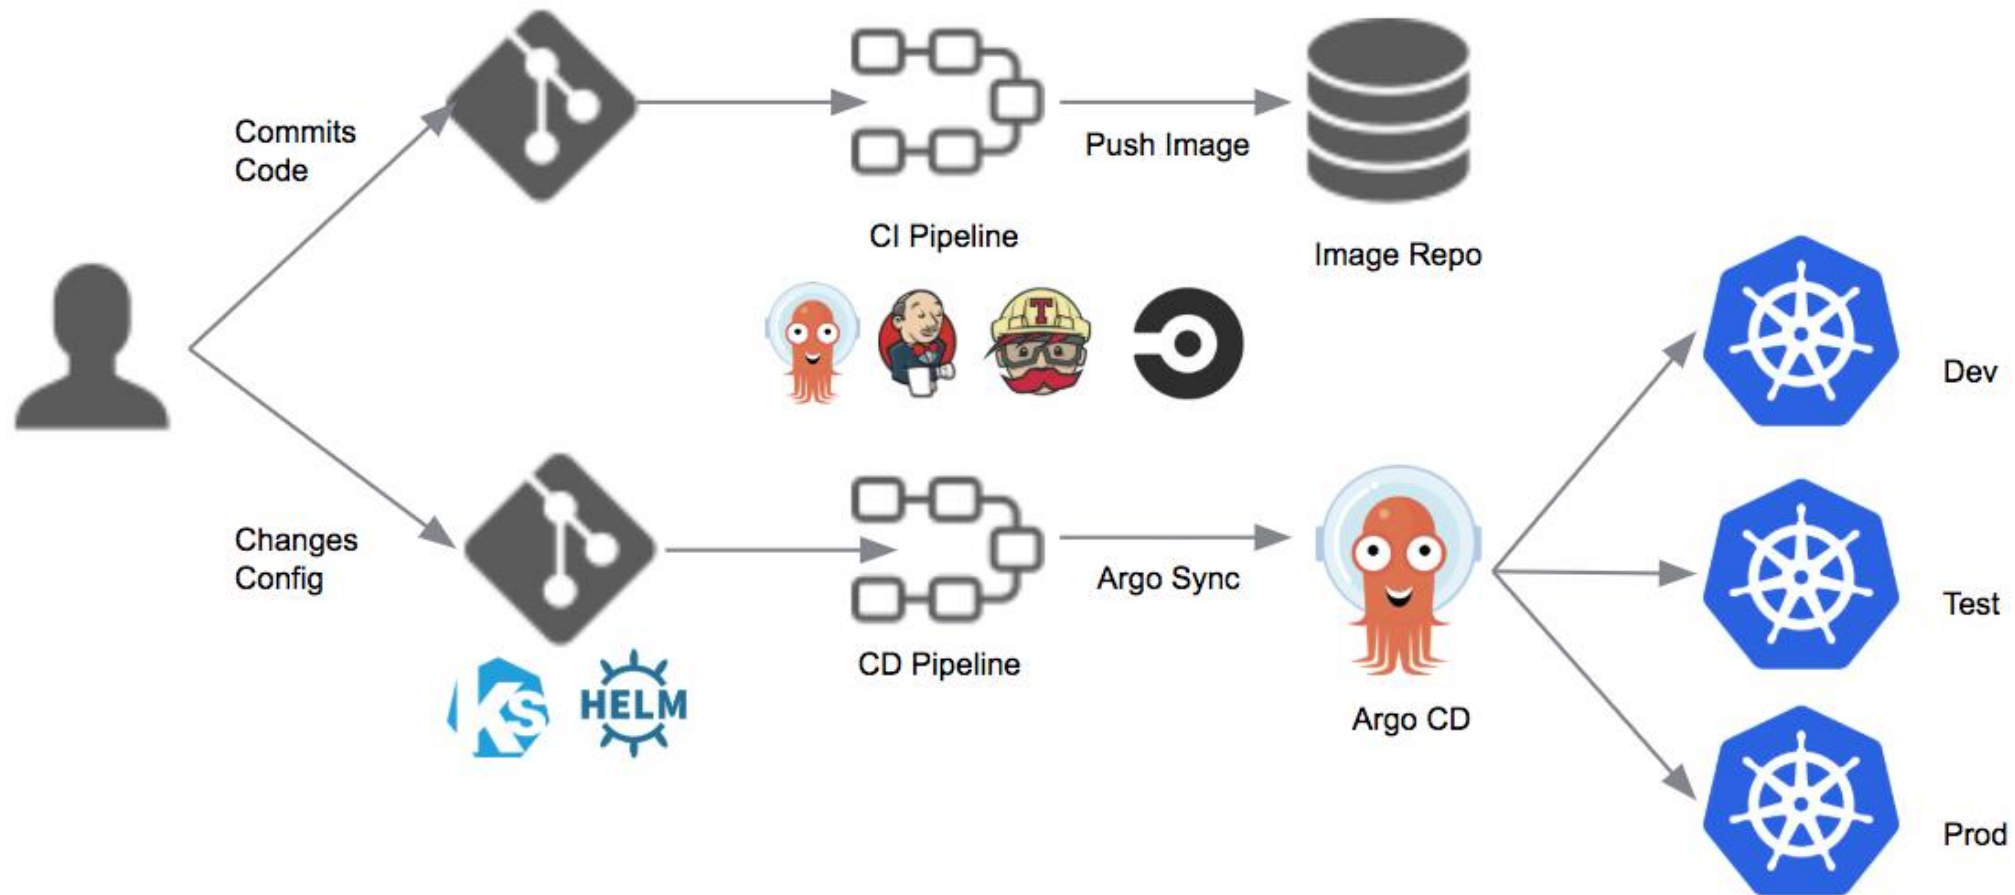

Syncs the state against the git-status

- Automatic rollout or marking out-of-sync resources

Simple way to apply changes from git to k8s

Full Workflow
